Fixed Louvre Endcaps

Features and Benefits

Installed at the end of the fixed louvre, this endcap provides functional and aesthetic benefits. It is cut from 3mm stainless steel, and pre-drilled and countersunk to suit each louvre size.

- ☐ Creates a clean, professional look whenever the end of the louvre blade is visible
- ☐ Prevents water from getting into the louvre blade when installed vertically
- ☐ Prevents insects from making their home inside the louvre blade
- ☐ Provides a flat surface that allows the louvre blade to be installed in custom configurations

Finishes

- ☐ Mill Finish
- ☐ Recommend powdercoating after assembly, individual powdercoating requires dedicated hooks through screw flute holes.

Hardware Compatibility

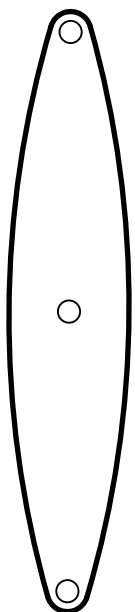

- ☐ 8g Countersunk Screws

Machining/ Installation

- ☐ The fixed louvre endcap comes ready to install. It can be easily fixed using countersunk screws into the existing screw flutes in the louvre.
