

REVOLUTIONISING URBAN LIVING: HOW CITYVIEW WINDOW AND DOOR SYSTEMS ELEVATED TNT TOWERS

Maria Babic
Marketing Manager, Darley Aluminium

TNT Towers, nestled in Redfern's (Sydney) vibrant centre, stands as a beacon of luxury and innovation with its 162 luxury apartments, commercial spaces, and retail outlets, all offering breathtaking city panoramas. This project is a testament to collaborative excellence, brought to life by the renowned architect Angelo Candalepas & Associates alongside the eminent Sydney developer Deicorp, marrying aesthetic appeal with functional design through high-end SMEG appliances, stone and marble countertops, and bespoke floor-to-ceiling windows and doors framed in aluminium.

The project's window and door solutions, crafted by NSW Fabricator Style Windows and Doors, incorporated Darley's commercial framing systems and CityView products, ensuring each of the building's eighteen floors radiated with style, functionality, and strict adherence to Australian Standards. The ground floor welcomed a Woolworths Metro, adorned with Darley's robust 150 mm x 50 mm commercial framing system, optimising visibility and light inflow, essential for the bustling retail environment.

For the commercial offices and the lobby, Style Windows selected systems that enhanced the spaces with unobstructed city views and natural lighting, adding to the workspace's ambience. The office spaces featured 100 mm front glazed framing and CityView sliding doors, known for their durability and acoustic properties, finished in a soothing Dulux Duratec Surfemist to complement the interior's neutral tones. Similarly, the

lobby showcased the 100 mm framing in Dulux Duratec White, paired with sleek, automatic sliding doors.

The residential quarters are no less impressive, with apartments boasting top-tier appliances and finishes. Key to merging the indoors with the scenic exteriors are the CityView Architectural sliding doors, offering soundproofing — a necessity given the proximity to Redfern train station — and the capability to support large, floor-to-ceiling configurations, enhancing the residents' living experience. The soundproof CityView Architectural Sliding doors, with an acoustic rating of Rw 35, are particularly noteworthy, addressing the challenge of noise while enabling expansive panel designs.

Additionally, the bedrooms feature CityView 50 mm heavy-duty awning windows, chosen for their superior noise reduction, ventilation, and compliance with safety standards, reflecting the project's commitment to comfort and quality.

TNT Towers is a landmark development that skilfully integrated luxury living with functional commercial spaces, thanks to the visionary design by Angelo Candalepas & Associates, Deicorp's development expertise, and the cutting-edge window and door solutions provided by Darley and Style Windows. This blend of style, innovation and quality ensured that TNT Towers was perfectly poised to cater to the needs of both residential and commercial occupants, now and into the future.
